SPINNING BLANKS

1. BLAAS M Nano

Taper: **Moderate**
 Action: **Moderate/Fast**
 Material: **Carbon 44 msi**
 Joint: **put over**
 Series: **SLM-N**

Sections: **2**

A combination of a smooth, half-full deflection with a restrainedly great speed. In this series we managed to join together these parameters with a great stability. The blanks from this series are characterized by a delicate and precise tip part, and a smoothly operating middle section. They perfectly prove correct in the hardest conditions during fish haul, guaranteeing a full safety.

Construction: **PAFB**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EURO)

2. BLAAS F Nano

Taper: **Moderate/Fast**

Action: **Fast**

Material: **Carbon 50 msi**

Joint: **put over**

Series: **SLF-N**

The blanks are similar to the Blaas M series, but characterized by a more significant greater speed and a more peak deflection. The precise tip part goes smoothly into the butt cap, which generates slightly more power than the M series. The perfect casting parameters, a great stability and confident behavior during the fight with the fish.

Construction: **PAFB**

3. BLAAS XF Nano

Taper: **Fast**

Action: **XFast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **SLXF-N**

Construction advanced blanks created from different graphite mats. The sensitive tip part, smoothly working middle section and a relatively strong butt cap. This series of fast blanks with a peak deflection, a very great stability and progressive work under burden. Great casting parameters and work under burden.

Construction: **PAFB, MMT, SCT**

Sections: 1

4. BLAAS SLIM Nano

Taper: **Medium**
Action: **XFast**
Material: **LR Carbon 58 msi Blend**
Joint: **put over**
Series: **SLS-N**

Sections: **2**

Construction advanced blanks created from different graphite mats. This is a series of fast blanks with small diameters and small convergence but at the same time with the peak deflection, the sensitive tip part and great progressive work. These blanks excellently prove correct in the hardest conditions during fish haul. Relatively thick wall protects against injuries. The perfect casting parameters.

Construction: **PAFB, MMT, SCT**

5. HERS II Nano

Taper: **XFast**

Action: **XXFast**

Material: **LR Carbon 66 msi Blend**

Joint: **put over**

Series: **SLR-N**

Sections: **2**

Made from resources of the highest quality, construction advanced, created from different graphite mats. Unbelievably sensitive tip part smoothly goes into the butt cap, generating a great reserve of power. Amazing stability, perfect casting parameters and a great sensitivity. This series are very fast blanks with a peak deflection, but a rather yielding butt cap.

Construction: **PAFB, MMT, SCT**

6. KRAAG F Nano

Taper: **Fast**

Action: **Fast**

Material: **LR Carbon 50 msi Blend**

Join: **put over**

Series: **SKF-N**

This blank is similar to Kraag XF but it has less speed and a little less tip part bending. More progressive work, butt part with slightly less power.

Construction: **PAFB, MMT, SCT**

Sections: 1

7. KRAAG XF Nano

Taper: **Fast**

Action: **XFast**

Material: **LR Carbon 58 msi Blend**

Join: **put over**

Series: **SKXF-N**

This is ultra fast blanks series with typically tip bending and relatively great convergence. Soft, delicate tip part goes smoothly into middle part and strong butt part of the blank. This blank is made in nano technology (nano resin and nano fibers), without glass scrim. Such construction gives us maximum sensitiveness, good control over baits work and safety tow fish. Owing to nano technology we could reach greater resistance to mechanical damages and better blanks balance.

Construction: **PAFB, MMT, SCT**

Sections: 1

8. KRAAG Elite Nano

Taper: **Fast**
Action: **XXFast**
Material: **LR Carbon 58 msi Blend**
Joint: **put over**
Series: **SKXE-N**
Sections: **1**

This is ultra fast, 1 piece blank series with highly tip bending and great convergence. Soft, delicate tip part goes smoothly into middle part and then into relatively strong butt part of the blank, which works progressively under load. Using the newest generation nano materials (nano resin and nano fibers) allows to achieve unusual resistance to mechanical damages, maximum sensitiveness, control over the bait's work, safe fish towing and better blank balance. Excellent cast parameters, great stability and safe behaviour during fighting with fish.

Construction: **PAFB, MMT, SCT**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EURO)

9. NOCTIS Nano

Taper: **XFast**
Action: **XFast**
Material: **LR Carbon 58 msi Blend**
Joint: **spigot**
Series: **SNT-N**
Sections: **2**

A state-of-the-art ultralight construction with a great balance resulting in very sensitive blank. Extremely thin and precise tip works smoothly enabling progressive move under load. The bottom part of these blanks is covered with a woven layer with a metallic, silver thread.

Construction: **PAFB, MMT, SCT**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EUR)
SNT633-2N	6'3"	1-3lb	0,5-6g	1,1	9,0	190,00

10. VEGTER BORON Nano

Taper: **Fast**

Action: **XFast**

Material: **Boron + LR Carbon 58 msi Blend**

Joint: **spigot**

Series: **SS-N**

These are our most advanced technologically constructions. A combination of graphite fibers with boron fibers placed on the whole length of the blank let us to create unique blanks of an unusual sensitivity. Great casting possibilities, a great speed of reaction to different burdens and a fluency of work under burden cause, that the fish is hauled faster, more effectively and safer. A precise and "cut" tip part, stable middle section and a reactive butt cap - these are the features of the blanks.

Construction: **BLRC, PAFB, MMT, SCT**

Sections: 1

11. ULTRALIGHT SLIM F

Taper: **Moderate**

Action: **Fast**

Material: **Carbon 50 msi**

Joint: **put over**

Series: **ULF-N**

A new series of fast blanks, Ultra Light type, with small convergences and diameters. Relatively large wall thickness. Used the latest generation nano materials (nano fibers and nano resin) allowed to get above-average resistance to mechanical damages what is extremely important with this type of blanks. The precise tip part goes smoothly into the butt cap, which generates quite a lot of power but it gives a very smooth and progressive deflection. The perfect casting parameters, a great stability and confident behavior during the fight with the fish. Dedicated to the work with small and lightweight bait.

Sections: 1

13. LEXI Nano

Taper: **Moderate**

Action: **XFast**

Material: **Nanoflex/Carbon 50 msi**

Joint: **put over**

Series: **SX-N**

Sections: **2 or 3**

A new blank series of the newest generation fiberglass obtained in nanotechnology processes.

Nanotechnology allows us to modify and improve materials at the level of particular atoms and molecules. The composite obtained in this way has high modulus of elasticity and disproportionately high strength modulus what gives very high resistance to stretching and bending strength.

These blanks are slim, sensitive, durable and well balanced. Allow safe towing. Nanoflex rod throws are accurate recurrent and effortless.

Power Joint creates smooth power transition between tip and butt part. The smooth perfect bending progression allows high-speed competitive towing without fish loosing.

Construction: **PAFB, MMT, SCT**

Blank	Length	Power	Overarm weight	Top (mm)	Bottom (mm)	Price (EUR)

14. APIS TRAVEL

Taper: **Fast**

Action: **Fast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **SAT-N**

Blanks from this series are distinguished by their speed accompanied with a progressive deflection and a fast convergence. Just a small load makes the soft and delicate tip part work. Then it goes smoothly into the middle part and finally into the relatively strong bottom part. The usage of the most advanced nano materials (nano fibers and nano resin) made it possible to obtain resistance to mechanical damages, maximal sensitiveness, control over the bait's work, safe fish towing and better blank balance. What makes these blanks unique, is the perfect casting parameters, a great stability and a confident behavior during the fight with the fish. The outer layer of woven increases aesthetic values and impact resistance.

Konstrukcja: **PAFB, MMT, SCT**

15. CATFISH

Taper: **Fast**

Action: **Moderate**

Material: **LR Carbon 50 msi Blend**

Joint: **put over**

Series: **SCT-N**

Exceptionally strong blanks used for catfish fishing rods building. Used nano materials allowed to get relatively light and delicate construction with enough strength to force to surrender during intensive haul even the largest specimens. Relatively subtle tip part goes smoothly into the butt cap which generates a lot of power. At the same time tip part readily goes into deflection under burden and gives large control over the hauled fish. The perfect casting parameters.

Construction: **PAFB, MMT, SCT**

FLY BLANKS

1. IGNIS Nano

Taper: **Fast**
 Action: **Fast**
 Material: **Carbon 50 msi**
 Joint: **put over**
 Series: **FI-N**

Sections: **4**

This is a series of fast blanks, with a relatively strong butt cap, perfectly working in difficult casting conditions, for example during a windy day. Their common feature is an ability of a smooth landing and a great stability. They are perfect for average, as well as far distances.

Construction: **PAFB, MMT, SCT**

2. VENTUS R Nano

Taper: **Fast**

Action: **XFast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **FR-N**

Sections: **4**

Construction advanced blanks created from different graphite mats. The series of these blanks has a strengthened middle section and a relatively strong butt cap. It corrects the loading of the blank during casting, raises the speed and gives a typically peak deflection. These are very fast, stable but also progressive blanks, which prove correct perfectly during fishing at big or average distances.

Construction: **PAFB, MMT, SCT**

3. VESPER Nano

Taper: **Moderate/Fast**

Action: **Fast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **FL-N**

Sections: **4**

Cutting edge construction solution specially designed for nymph fishing. Faultlessly sensitive tip works progressively under load and keeps perfect balance. These features combined with a high speed of a rod makes the product especially relevant for the mentioned method.

Construction: **PAFB, MMT, SCT**

Blank	Length	Class	Top (mm)	Bottom (mm)	Price (EURO)
FL961-4N	9'6"	#1	1,2	8,4	259,00
FL1001-4N	10'0"	#1	1,2	8,5	261,00

4. VENTUS SALT Nano

Taper: **Moderate/Fast**

Action: **Fast**

Material: **LR Carbon 58 msi Blend**

Joint: **put over**

Series: **FRS-N**

Sections: **4**

We created a series based on a wide range of graphite mats dedicated especially for fishing by the salt water. The blanks have strengthened upper section, which goes imperceptibly into relatively solid bottom part. Such construction improves rod loading during casting and enables easier work with heavier baits.

Constructions: **PAFB, MMT, SCT**

Blank	Length	Class	Top (mm)	Bottom (mm)	Price (EURO)
FRS9212-4N	9'2"	#12	1,7	13,2	310,00
FRS9313-4N	9'3"	#13	1,8	13,4	317,00

5. VENTUS SWITCH Nano

Taper: **Moderate/Fast**
Action: **XFast**
Material: **LR Carbon 58 msi Blend**
Joint: **put over**
Series: **FSW-N**

Sections: **4**

Construction advanced blanks created from different graphite fibers. The series of these blanks has a strengthened middle sections and a relatively strong butt cap. It corrects the loading of a blank during casting, raises the speed and gives a typically peak deflection. These are fast, stable but also progressive blanks, which have been created to gain maximal casting possibilities.

Construction: **PAFB, MMT, SCT**

Blank	Length	Class	Top (mm)	Bottom (mm)	Price (EURO)
FSW1167-4N	11'6"	#7	1,7	11,5	282,00
FSW1207-4N	12'0"	#7	1,7	11,8	288,00

6. VENTUS DH Nano

Taper: **Moderate/Fast**
Action: **XFast**
Material: **LR Carbon 58 msi Blend**
Joint: **put over**
Series: **FDH-N**

Construction advanced blanks created from different graphite fiber mats. A series of fast blanks with a strengthened middle section, and a strong, progressive butt cap. Optimized when it comes to cooperation with the heads, which, combined with a huge stability, gives perfect casting possibilities.

Construction: **PAFB, MMT, SCT**

Sections: **4**

Blank	Length	Class	Top (mm)	Bottom (mm)	Price (EURO)
FDH1269-4N	12'6"	#9/10	2,0	14,8	348,00

7. TEMPES Nano

Taper: **Moderate/Slow**
Action: **Slow**
Material: **Glass**
Joint: **spigot**
Series: **FT-N**

Sections: **3**

This series of blanks is made from glass fiber, of a full deflection and a smooth landing. They are perfect for delicate use, especially in the "classic" method of the dry fly.

Construction: **PAFB**

Blank	Length	Class	Top (mm)	Bottom (mm)	Price (EURO)
FT662-3N	6'6"	#2	1,5	9,4	188,00
FT703-3N	7'0"	#3	1,5	10,4	193,00

FT785-3N	7'8"	#5	1,5	11,2	202,00

CARP BLANKS

1. HERMATTAN Nano

Taper: **Medium/Fast**
Action: **Medium/Fast**
Material: **Carbon 43 msi**
Joint: **put over**
Series: **CH-N**
Sections: **2**

This is a series of blanks made from mats with 43 msi fibers. A combination of a smooth half-full deflection with a moderately high speed. In this series we combined these parameters with a big stability. Hermattan blanks are characterized by a work on the whole length of the rod even with small specimen. Perfectly suited for small and medium pool, giving great satisfaction with haul even the smallest specimen. Cooperate with braid very well giving comfort of the haul and safety in the last phase. These blanks work well in the hardest conditions during fish haul guaranteeing a full safety.

Blank	Length	Power (lb)	Top (mm)	Bottom (mm)	Price (EURO)
CH12025-2N	12'0"	2,5	2,7	15,4	170,00
CH12625-2N	12'6"	2,5	2,8	15,3	175,00
CH13025-2N	13'0"	2,5	2,8	15,4	180,00
CH12030-2N	12'0"	3,0	3,2	16,2	177,00
CH12630-2N	12'6"	3,0	3,3	16,2	182,00
CH13030-2N	13'0"	3,0	3,3	16,3	188,00

2. SAMUM Nano

Taper: **Fast**
Action: **Fast**
Material: **Carbon 50 msi Blend**
Joint: **put over**
Series: **CS-N**
Sections: **2**

The main material used for these blanks production is 50 msi mats. The blanks are similar to the Hermattan series but characterized by visible greater speed and greater peak deflection. The tip part goes smoothly into the butt cap which generates slightly more power than the Hermattan series. Great casting parameters, a big stability and confident behavior during the fight with the fish make from this rod excellent versatile method for fighting even with the largest specimens. Samum blank allows you to derive pleasure during haul and give you full control in this phase of the fighting with the fish.

Blank	Length	Power (lb)	Top (mm)	Bottom (mm)	Price (EURO)

3. TRAMONTAN Nano

Taper: **XFast**
Action: **XFast**
Material: **Carbon 58 msi Blend**
Joint: **put over**
Series: **CT-N**
Sections: **2**

The basic material is 58 msi mat. Construction advanced blanks created from different graphite mats. The tip part goes into smoothly working middle section and a strong butt cap. The series of fast blanks with a peak deflection, a very big stability and progressive work under burden. Great casting parameters.

Blank	Length	Power (lb)	Top (mm)	Bottom (mm)	Price (EURO)
CT12027-2N	12'0"	2,7	2,6	15,0	198,00
CT12627-2N	12'6"	2,7	2,7	14,9	203,00

4. AKMAN Nano

Taper: **Fast**
Action: **Fast**
Material: **Carbon 50 msi Blend**
Joint: **put over**
Series: **CA-N**
Sections: **2**

The main material used for these blanks production is 50 msi mat. Similar to the Samum series but characterized by greater speed and greater peak deflection. Relatively subtle tip part goes smoothly into the butt cap which generates big power. Great casting parameters, a big stability and confident behavior during the fight with the fish make from this rod excellent, all-purpose method for fighting even with the largest specimens. Akman blank allows you to derive pleasure during haul and give you full control in this phase of the fighting with the fish.

5. BURAN Nano

Taper: **XFast**
Action: **XFast**
Material: **Carbon 58 msi Blend**
Joint: **put over**
Series: **CB-N**
Sections: **2**

The basic material is 58 msi mat. Similar to the Tramontan series but characterized by greater speed and greater peak deflection. Relatively subtle tip part goes smoothly into the butt cap which generates big power. The fastest and the most peak carps blank from our offer. Great casting parameters, a big stability and confident behavior during the fight with the fish make from this rod excellent, all-purpose method for fighting even with the largest specimens.

The above rates apply to the unpainted blanks. Painting requires an extra charge – 35 EUR for a standard paint or 40 EUR for a transparent paint. Available versions are provided on our website.

In case of painted blanks, joints remain unpainted.

The presented offer includes only the standard products. If you are interested in non-standard blanks, rods or any individual solutions regarding our products or any form of future cooperation, please contact us.
